```
The present sequence encodes a protein having a flowering regulating activity, which is designated MPC1. The genomic sequence is given in AAZ36948. A rice MPC1 is also disclosed in the specification. The flowering regulating mutation of significant homology with each other immediately after germination (super early flowering metation of the MPC1 gene eliminates normal MPC1 polynucled sequence can be used to produce plants with altered or inhibiting the expression of the wild type plants, by enhancing polynucleotides can be used to produce the spene. Antisense gene. This alteration can be used to reproduce the effects of the mutated MPC1 polynucleotides can be used to reproduce the effects of the mutated MPC1 polynucleotides can be used to reproduce the effects of the mutated MPC1 flowering inhibition of vegetables increases the yield of food crops.
                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence 2280 BP; 663 A; 445 C; 521 G; 651 T; 0 other;

An Arabidopsis MPCI is also disclosed in the specification. The rice and Arabidopsis cDNAs show significant homology with each other. A naturally occurring mutation of the MPCI gene eliminates normal flowering regulating ability of plants, and leads to flowering mimediately after germination (super early flowering mutation). The MPCI polynucleotide sequence can be used to produce plants with altered flowering times in comparison with wild type plants, by enhancing or inhibiting the expression of the flowering regulating gene. Antisense polynucleotides can be used to reproduce the effects of the mutated MPCI gene. This alteration can be used to increase the yield of food crops. Flowering inhibition

plant encode polypeptides which are capable of affecting one or me vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics magnification.

                                                                                                                                                                                                                                                                                                                                                                              Isolated nucleic acid sequences obtained from the VRN2 locus of a plant encode polypeptides which are capable of affecting one or more vernalization responses such as, flowering time, leaf size and/or shape or the shade avoidance response of a plant into which the nucleic acid is introduced. Introducing such sequences into plants to alter these characteristics maximises the reproductive success of the plant. This cDNA represents expressed sequence tag clone AI163743 from poplar trees (Populus tremula x Populus tremulaides) which has homology in the C-terminal region of the Arabidopsis thaliana VRN2 gene.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Isolated vernalization gene VRN2 is used to produce transgenic plants with altered vernalization response, flowering time, leaf size and/or shape or shade avoidance response for maximized reproductive success

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 345, Application US/09216393

Patent No. US2001001447A1

GENERAL INFORMATION:

APPLICANT: Milhausen, Michael James
TITLE OF INVENTION: TOXOPLASMA GONDII PROTEINS, NUCLEIC ACID MOLECULES, AND
FILE REFERENCE: TX-1-C2
CURRENT APPLICATION NUMBER: US/09/216,393

CURRENT APPLICATION NUMBER: US/09/216,393

EARLIER APPLICATION NUMBER: US/09/94,825

NUMBER OF SEQ 1D NOS: 364

SOFTWARE: PStentin Ver. 2.0
                                                                                                                                                                                                                                                                     SEQ ID NO 345
LENGTH: 1397
TYPE: DNA
ORGANISM: Toxoplasma gondii

The cDNA was directionally ligated into the Unizap XR vector from Stratagene and packaged using Gigapack III Gold packaging extracts. Plasmids containing cDNA inserts were excised from the recombinant lambda-Zap phage using Ex-assist helper phage and propagated in SOLR cells."

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  133
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             cloned Pfu DNA polymerase, ligated to Ecori adapters and subsequently phosphorylated. The XhoI site within the first-strand synthesis primer was then restricted by digestion with XhoI; all XhoI sites in the CDNA would be protected by their hemimethylated status. The CDNA constructs were size-fractionated with a 500bp cutoff, using GibcoBRL Life Technologies' cDNA Size Fractionation column. The column eluent was then ligated into stratagene's pBluescript II XR Predigested vector (pBluescript II SK(+) that has been digested with EcoRI and XhoI, and phosporylated by Stratagene). Both the white and blue colonies appear to contain recombinant plasmids with cDNA inserts, based on size (n=25). This library was constructed by Dr. Paul Keim and Dr. Virginia Coryell."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Conservative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ø
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    first-strand synthesis primer was used. An 'anchor' nucleotide (V=A,C, or G) was added to the 3' end of the primer [GAGAGAGAGAGAGAGAGAGAGTCTCGAG(T)18V] to anchor the primer at the 5' end of the poly(A) tract. After second-strand synthesis, the cDNA ends were filled in with
